This document contains important information about installation, fixed limitations, and known limitations for PowerExchange for Salesforce. Do not upgrade to this release from a previous version without carefully reading the relevant sections on upgrading and bug fixes, since bug fixes may change the behavior of existing sessions.

Installation

When the installer starts in console mode, it displays a message that it is preparing for silent mode installation. On Solaris, it displays a message that it cannot find the install.bin file. You can ignore these messages. (305944)

Fixed Limitations

The following table describes fixed limitations:

CR	Description
354472	A task that performs CDC and writes to a flat file target can contain duplicate records when the record is created within the CDC time period.

Known Limitations

The following table describes known limitations:

CR	Description
384217	Processing large attachments can cause the session to fail with a null pointer exception. Workaround: Increase the Java heap size on the PowerCenter Integration Service machine.
365387	Sessions that include Salesforce sources with polymorphic relationships fail to complete.
237251	Statistics in the session log may be incorrect for Salesforce Bulk API target sessions. Workaround: Connect to Salesforce to verify the number of rows successfully written to targets.
178043	The session does not persist the value of a variable when you configure the session with the SOQL filter condition and you change the initial value of the variable. The session resets the variable to the initial value when you change the initial value.
178041	An error occurs when you use a mapping variable in the SOQL filter condition.
174132	The PowerCenter Integration Service ignores the Stop on Error Threshold setting when a session writes to a Salesforce target. The PowerCenter Integration Service continues to run the session after the error threshold is reached.
172235	A session that contains a Salesforce Lookup transformation and runs on Linux has slow performance.

Third-Party Limitations

The following table describes third-party known limitations:

CR	Description
222163	Due to a change in the Salesforce API, a session fails if it contains a Picklist transformation with one or more relationships and the Picklist transformation is configured to use a Salesforce API version earlier than 17.0. Workaround: Configure the Picklist transformation to use Salesforce API version 17.0 or later.
221239	Due to a change in the Salesforce API, you cannot import objects with Salesforce API version 16.0 or earlier. Workaround: To import objects, use Salesforce API version 17.0 or later.

Informatica Global Customer Support

You can contact a Customer Support Center by telephone or through the Online Support.

Online Support requires a user name and password. You can request a user name and password at <http://mysupport.informatica.com>.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at <http://www.informatica.com/us/services-and-training/support-services/global-support-centers/>.
